Constellation™

ENTEGRA SYSTEMS

Automate the process of managing and operating SATCOM networks and make fast, reliable communications the norm.

Establishing consistent satellite communications shouldn't be a challenge for your terminal operators, and it's easy with the Constellation software suite.
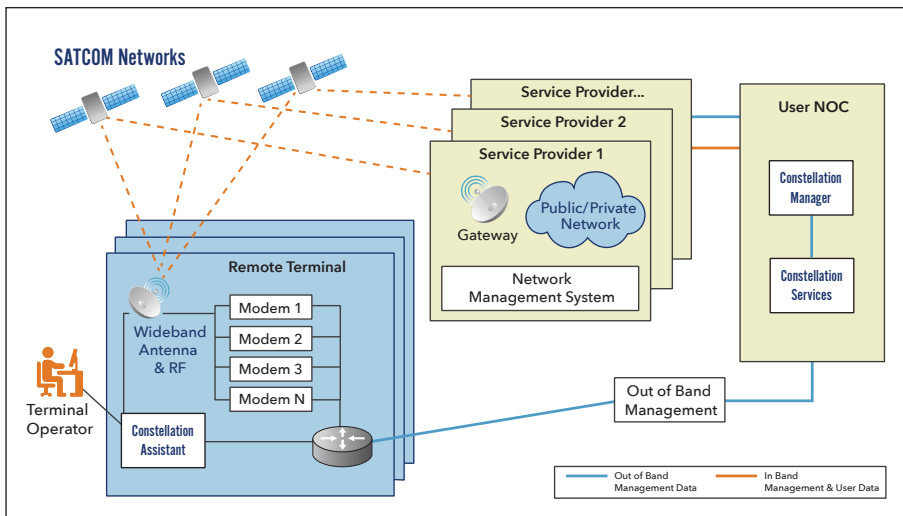

Constellation Manager provides Network Operations Center operators with full situational awareness of all terminals, regardless of provider. Terminals can be easily managed from the Constellation Manager.

- Build, update, and manage configurations across multiple SATCOM networks, for more efficient utilization and bits-per-dollar

- Full fleet situational awareness across all managed SATCOM networks, enabling effective planning, rapid response to threats, load balancing, and efficient resource allocation

- Creation, management, and transmission of terminal configuration plans across all managed SATCOM terminals

- Equipment level status even if the SATCOM network connection is offline

Constellation Assistant enables semi-autonomous resolution to local line-of-site blockages, network failures, and network congestion. It provides simple, seamless switching between SATCOM networks.

- Rapid roaming between providers and mobility within service provider networks

- Universal user interface across all terminals, regardless of manufacturer, or components

- Flexible Open Driver architecture enables rapid implementation of new drivers and devices
